

## Introduction'

### Learnings from 50 years in the Industry, June 2022

#### Unique Gas Issues or Incidents and Lessons Learned

1. Acetylene why is it dangerous to overpack or cap a leak? Why did FDNY pay for a company to fly people and equipment up from Texas to decommission 2 cylinders in Brooklyn?
2. Ammonia is a corrosive and a flammable gas. What PPE in an emergency? Responders have been seriously injured by not considering the flammability hazard.
3. Arsine the Asia Freighter incident had over 10 people acutely exposed, what happened and what was the medical treatment and the lessons learned?
4. Arsine incidents which includes a 65 lb release
5. Boron trifluoride when released creates a dense white cloud, how to respond? It also does not respond to a mineral acid gas sensor for leak detection like the other acid gases
6. Chlorine, the DHS Jack Rabbit releases provide enormous ER information about a significant (20 ton) release. Would a firefighter and a fire engine survive a tsunami wave of chlorine?
7. Chlorine trifluoride almost destroyed a 300 mm Fab, what other incidents have happened? An overfilled cylinder ruptured and an operator made a mistake drilling into a cylinder.
8. Cryogenic liquid, what happens if you shoot an RPG into a liquid oxygen tank? Machine gun a liquid nitrogen tank? This happened in South America
9. Diborane is an unstable gas forming penta and decaborane over time. These are extremely reactive as well as dermal toxins. Pentaborane has been the cause of a worldwide EPA recall. One operator was splashed with it and was paralyzed for a week.
10. Disilane forms energetic byproduct in the vacuum pump and vent lines. One company surrounds their vacuum pumps with blast blankets.
11. Explosive Gas Mixtures, almost 40 known incidents 1963- 2019 many fatal. Why did they happen? They continue to be a problem
12. Fluorine even at 0 psig can react with stainless tubing. To control this problem the pressure is limited to 500 psig in the cylinder
13. Gas mixtures made with a liquefied gas can reliquefy during cold temperatures. Will they remix?
14. Germane is an unstable gas that ruptured a cylinder in 1984. The controls put in place have prevented at least 3 major incidents
15. Hydrogen chloride, why did the 40' tube trailer explode?
16. Hydrogen selenide has been involved in at least 3 incidents where the entire cylinder was released causing multiple acute exposures, what happened?
17. Purification of nitrogen trifluoride using an active solid such as mole sieve can be dangerous. Explosions and fire
18. Methyl Chloride Route 295 Reefer Explosion, Container full of tangerines explodes
19. Nitric oxide becomes shock sensitive at cold temperatures. Explosions during purification
20. Nitrous oxide, laughing gas everyone assumes is benign, yet it has been involved in a number of severe explosions.
21. Nitrosyl chloride incident
22. Phosphine
23. Severity of a silane explosion, how much does it take to completely flatten a gas cabinet?

24. The Gollub incident in 1988 has been the silane incident with the most severe outcome (3 fatalities and 1 Injury). The chemist that attempted to analyze the cylinder speaks about what happened
25. Unusual silane incidents, remove the valve while the cylinder is full! operate a silane supply business from a motel! Corrosion of a cylinder in a heated water bath, silane permeated through the cylinder walls. Overpacking this silane cylinder while the wall is popping and flashing.
26. Thermodynamically unstable gases such as acetylene, cyanogen, diborane,, germane, nitrous oxide, incidents and how did we control them in the cylinder?

### **Packaging**

1. Cylinder/Valve
2. Is it a ASME Pressure Vessel or DOT Cylinder or both?
3. What can happen if the cylinder is dropped without a cylinder cap protecting the valve? How about ton cylinders?
4. Tube trailers
5. Ton Cylinders
6. Cylinder fill amount
7. Fabrication of the Ngai LIN Tanker
8. The Development of a cylinder valve Restrictive Flow Orifices (RFO)
9. Cylinder cap
10. Why do cylinders fail?
  - a. Overfill
  - b. Stress Corrosion, CO or S
  - c. Explosive mixture
11. High Pressure Jumbo Tube Failure
12. Subatmospheric gas delivery
13. Can a Carbon Steel Cylinder Chilled with Dry Ice Embrittle on Impact?
14. Development of a Cylinder Valve Restrictive Flow Orifice
15. Development of an Electronic Specialty Gas Valve and Outlet Connection
16. Droptesting of cylinders without Cylinder Cap
17. Drop a full Y Container from an Forklift from 8 ft
18. Fabrication of the Ngai LIN Tanker
19. High Pressure Cylinder Failures

### **Physical Properties**

1. Adiabatic compression, flow velocity, reduction of diameter, sweep of curve
2. Compressibility of a Compressed Gas
3. Latent Heat of Vaporization
4. Vapor Specific Gravity
5. Using Heart Cut for Higher Purity Liquefied MOCVD Gas
6. Vapor Pressure of a Liquefied Gas

## Regulations/standards

1. Hazard Classification
2. Toxicity, flammability ISO Standards
3. When can the cylinder be labelled “empty”?
4. Coaxial Tubing for Silane
5. ESM US Standards and Regulations
6. Gas Mixture Toxicity Classification
7. Ngai to CGA History of P20 and ISO10298 Sept2015

## Unique Problems

1. Liquefy air
2. Teflon tape on valve outlet threads
3. Blown pressure gauges
4. Some interesting silane incidents

## Safety

1. Silane Testing
2. Cylinder and valve safety
3. Metal Hydride Gas Cylinder Leak Check
4. Is an “Empty” cylinder hazardous waste?

## Gas Systems

1. High purity surface preparation
2. Passivation
3. Purge gas
4. Cylinder heaters
5. Autogard

## Emergency Response

1. History of Cylinder Salvage Vessels (ERCV's) and regulations. What didn't work in the 1960-70's?
2. Cascade
3. Cold Coil Transfer
4. Purging cylinder (Huff and Puff, Flow through)
5. Cylinder or valve drilling, penetration some interesting learnings
6. Flammable or Pyrophoric Gas Fire
7. When is the cylinder empty?

## Ngai Rules of Thumb

1. Leak rate
2. Heat transfer

## Medical Treatment

1. Arsine, Hydrogen Selenide, Germane

2. Phosphine
3. Diborane

They include:

- What happens if I drop a cylinder onto the valve?
- Air liquefaction has caused a few explosions?
- Why is it not safe to neutralize a spill of hexachlorodisilane?

To prevent future incidents, all gas supplier, users and others must be aware of the following incidents and lessons learned. This is not a comprehensive list it is only ones that I know of. Unfortunately many in my generation have retired without passing along this critical information. I have tried to be as accurate as possible

## **Introduction**

The specialty gas industry began with Matheson.<sup>1</sup>

### **The Early Days**

The title, "Father of the Specialty Gas Industry," rightfully belongs to Adam Matheson, a chemist who established The Matheson Company in the late 1920s. That company's first customers were chemistry laboratories, as well as schools, colleges, and universities (lecture halls). The products offered were mainly gas generators (primarily for hydrogen sulfide), to be used in qualitative and quantitative chemistry, and the popular lecture bottles first used during class sessions that demonstrated the properties of a number of common gases.

When Adam Matheson died in the early 1940s, The Matheson Company was acquired by the Ferris family of Hackensack, N.J., with George Ferris (a lawyer) assuming the position of President. His good friends, Dave Ross (accountant) and a later arrival, Cass Heinrich (comptroller), rounded out the executive staff. During World War II, Matheson supplied the U.S. Navy and the Army Air Force with small cylinders of compressed air for use in inflating life rafts. During that period, the Ronson Company invented the butane-fueled cigarette lighter; and Matheson was contracted to manufacture the original filling equipment for those lighters. For a short time, Matheson also filled the lighters until Ronson assumed that operation.

AMMONIA  
 ARGON  
 BROMINE TRIFLUORIDE  
 BUTADIENE  
 BUTANE  
 BUTENE 1  
 BUTENE 2  
 CARBON DIOXIDE  
 CARBON MONOXIDE  
 CHLORINE  
 DIMETHYL AMINE  
 DIMETHYL ETHER  
 ETHANE  
 ETHYL CHLORIDE  
 ETHYLENE  
 ETHYLENE OXIDE  
 FLEON (12)  
 HELIUM  
 HYDROGEN  
 HYDROGEN CHLORIDE  
 HYDROGEN FLUORIDE  
 HYDROGEN SULPHIDE  
 ISOBUTANE  
 ISOBUTYLENE  
 METHANE  
 METHYL BROMIDE  
 METHYL CHLORIDE  
 MONOETHYL AMINE  
 MONOMETHYL AMINE  
 NICKEL CARBONYL  
 NITROGEN  
 NITROUS OXIDE  
 OXYGEN  
 PHOSGENE  
 PROPANE  
 PROPYLENE  
 SULPHUR DIOXIDE  
 TRIMETHYL AMINE

**The Matheson Co.**  
 EAST RUTHERFORD, N. J.

*Price List*

**COMPRESSED GASES**  
 FOR LABORATORY  
 AND COMMERCIAL USES

No. 1 350.1  
 No. 2 350.2  
 No. 3 350.3  
 L. H. No. 5 350.5  
 No. 3 350.3  
 No. 2 350.2

**Matheson**

**GAS MASK**  
 One Hour Oxygen Breathing Apparatus.  
 Safe Respiratory Protection.

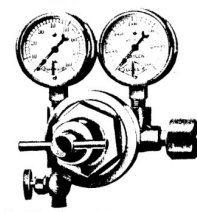

Oxygen is supplied from a high pressure cylinder to the mask and is regulated.  
 Breathing is independent of the surrounding atmosphere.  
 Used by Fire Dept., Gas and Chemical Plants. Price, \$95.00  
*Page Sixteen*

---

**Matheson**

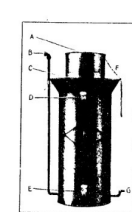

**REDUCING VALVE No. 1**

0 to 50 lbs. delivery pressure.  
 0 to 2000 lbs. tank pressure capacity.  
 Forged brass. Light nickel plated spacers. Large metal  
 connections. New patented safety feature. As priced by the  
 U. S. Patent Laboratories.  
 Recommended for use with Oxygen, Nitrogen, Carbon  
 Dioxide, Hydrogen, etc.  
 For Acetylene with special joints.  
 For Hydrogen Sulphide with special parts.  
 Capacity given on New page 4.

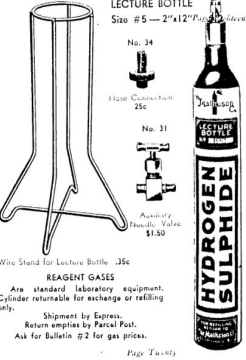

**Matheson**

**HYDROGEN SULPHIDE GASOMETER**

The select instrument to store Hydrogen Sulphide in at a  
 reduced pressure for laboratory use.

**LECTURE BOTTLE**  
 Size #5 — 2"x12" P.S. 100 lbs. capacity

No. 34  
 Hood Connection 25c  
 No. 31  
 Auxiliary Pressure Valve \$1.50

Wire Stand for Lecture Bottle .35c

**REAGENT GASES**  
 Are standard laboratory equipment.  
 Cylinder returnable for exchange or refilling  
 only.  
 Shipment by Express.  
 Return empties by Parcel Post.  
 Ask for Bulletin #2 for gas prices.  
*Page Twenty*

We learned from the first generation, Ezra Erb, Linde, Dave Scott, Air Products, Herb Gill, Precision Gas Products, Frank Olejko, Liquid Carbonic, Al Mossman, Matheson, Robert Sterrett, Matheson Bill Kalaskie, Superior Valve, Felix Smist, Sherwood Valve

The incidents involving silane and fluorine are well known and will not be reported here.
